## INTRODUCTION

- The smartphone penetration rate for disabilities is 65.4%
- This indicates that 41% of people with visual impairment are accompanied by difficulties surveying the difficulty of using smartphones.
- 44.2% answers “the environment for access to necessary information is not ready." Next, 30.2% were "most services focused on non-disabled people“
- Smoking rate of disabled people is 18.7%, non-disabled people is 22.6%
- They need an application for people with low vision

## INITIAL PROTOTYPE

Figure 1. Screenshots of Application Prototype

## CONCLUSION

- We propose a prototype based on features and UIs to support people with low vision for quitting smoking.
- On the main screen, daily goals were placed at the center to increase motivation. Also, instead of scrolling, We made it possible to sweep the records of the day.
- Second sections that will allow you to sweep through health information for quitting time.
- We aim to develop UIs based on symptoms by installing various features of the low vision application for smoking cessation.
- We plan to make the application considering the symptoms of blind spot, night blindness, corneal opacity, etc.in the field of vision other than the two symptoms.

## Smoking assertion application

1) **Setting goals and strengthening smoker’s daily goal**
   - It can strengthen smoker motivation to quit smoking
2) **Information about health change**
3) **Adjusting the placement of characters and feature**
   **-** Central vision is phenomenon in which appears black at center.
   - Peripheral is a phenomenon where edges are not clearly visible.

## RESEARCH QUESTION

- RQ1: What are the features for basic smoking cessation?
- RQ2: What are the UI considerations for low vision?

## Application User Interfaces

1) **Many characters do not appear on one screen**
   -People with low vision have a narrow vision than non-disabled people
2) **Low vision users are difficult to read using scrolling**
   -Using sweep than a scrolling
3) **Adjusting the color in the blindness setting**
